SUMMARY

Computer Information Systems student at Portland Community College with 7+ years of hands-on experience troubleshooting, repairing, and calibrating advanced display systems at Planar Systems. Methodical and documentation-driven, with a record of delivering finished work: a live portfolio website, two published Python data-analysis projects, and a data analytics course completed with full credit on every lab. Ready to bring that same discipline to an IT support team now, with cybersecurity as the long-term goal.

CORE STRENGTHS

Diagnosing and repairing hardware · Testing, calibration, and quality checks · Training new employees · Working from technical documentation · Python and SQL data analysis · Building and shipping websites

TECHNICAL SKILLS

- **Systems and tools:** Windows, Microsoft Excel, Git and GitHub, Tableau, Arena PLM
- **Programming and data:** Python (pandas, scikit-learn, matplotlib), SQL (SQL Server), JupyterLab
- **Web:** HTML, CSS, JavaScript, React, Three.js
- **Hardware and quality:** electronics repair, calibration, high-voltage (Hipot) safety testing, ESD-safe handling, final quality inspection

EXPERIENCE

Production Specialist, Planar Systems Inc.

Hillsboro, OR · Dec 2017 to Aug 2025

- Diagnosed and repaired advanced display systems and electronic assemblies for 7+ years, returning units to specification through calibration and testing.
- Performed high-voltage (Hipot) safety testing and precision calibration so each unit met product integrity and safety requirements before shipment.
- Trained new employees on cabinet calibration, LED module assembly, and chassis troubleshooting, and led manufacturing projects.
- Repaired to specification by working from Arena PLM engineering drawings and work instructions; maintained ESD safety standards.
- Partnered with engineering and production teams on process improvements.

PROJECTS

Fuel Economy Regression Case Study

Python · github.com/KhaylubThompsonCalvin/fuel-economy-analysis

- Analyzed 398 vehicles to find what predicts fuel economy; built regression models that explain 79% of the variation in unseen test data and documented what the model cannot claim.
- Cleaned and corrected the raw data before modeling, including fixing 8 misspelled manufacturer names that would have split brands across the results.

SQL to Python Analytics Pipeline

Python, SQL · github.com/KhaylubThompsonCalvin/sql-python-analytics-pipeline

- Built a reproducible analysis of 146 years of public Social Security name data (1880 to 2025) in Python and Jupyter, from download to charts, so anyone can re-run it without database access.
- Kept the original SQL Server integration as working evidence of database connectivity, with credentials handled through environment variables.

Khaylub.com, personal portfolio site

Live · khaylub.com

- Designed, built, and launched a portfolio site three months ahead of its target date using React, Three.js, and Blender 3D models.
- Set up and fixed the full build-and-deploy pipeline and documented each fix for reuse.

EDUCATION

Computer Information Systems, Portland Community College

Portland, OR · Dec 2023 to present, full-time

- Data Analytics (CIS277A): completed Summer 2026 with full credit on all ten labs.
- PCC AI Hackathon (Mar 2026): trained a JetBot robot with a collision-detection model.

Law Studies (attended), University of Arizona

Tucson, AZ · 2016 to 2017

CERTIFICATIONS AND TRAINING

ESD and Calibration Certified (Planar Systems, 2017 to 2025) · Hipot Testing Calibration Procedures · Final Quality Check and First Turn-On Processes · Lean Manufacturing and Continuous Improvement

Planned: CompTIA A+ and CompTIA Security+
