SUMMARY

Computer Information Systems student at Portland Community College with 7+ years of hands-on hardware troubleshooting, repair, and calibration at Planar Systems. Works from technical documentation, writes clear procedures, and has trained new employees on diagnostic and calibration work. Has published three data projects in Python, SQL, and Tableau. Seeking an IT support or help desk role, with cybersecurity as the long-term goal.

SKILLS

- **Support and troubleshooting:** hardware diagnostics and repair, testing and calibration, technical documentation, training and onboarding, quality inspection
- **Systems and tools:** Windows, Microsoft Excel, Git and GitHub, Arena PLM, electrostatic discharge (ESD) safe handling
- **Data:** SQL (SQL Server), Python (pandas, scikit-learn, matplotlib), JupyterLab, Tableau, data cleaning and validation, regression
- **Web:** HTML, CSS, JavaScript, React, Three.js

EXPERIENCE

Production Specialist, Planar Systems Inc.

Hillsboro, OR | Dec 2017 to Aug 2025

- Diagnosed and repaired faults in advanced display systems and electronic assemblies for 7+ years, testing and calibrating each unit back to specification.
- Performed high-voltage (Hipot) safety testing and precision calibration so every unit met safety and quality requirements before shipment.
- Provided internal technical training to new employees on cabinet calibration, LED module assembly, and chassis troubleshooting, and led manufacturing projects.
- Repaired to specification from Arena PLM engineering drawings and work instructions, following ESD safety standards.
- Partnered with engineering and production teams on process improvements.

PROJECTS

Khaylub.com, personal portfolio and library

Live | khaylub.com

- Directed and implemented the Khaylub.com rebuild using Astro, GitHub-based workflows, automated testing, and AI-assisted development.
- Verified the September 2026 rebuild with more than 1,200 automated tests, continuous integration on GitHub Actions, WCAG 2.2 AA accessibility checks, and security headers; the first version launched in June 2026, three months ahead of its target date.

Fuel Economy Regression Case Study

Python | github.com/KhaylubThompsonCalvin/fuel-economy-analysis

- Analyzed 398 vehicles to find what predicts fuel economy; the regression model explains 79% of the variation in unseen test data, and its limits are documented.
- Cleaned and validated the data first, correcting misspelled manufacturer names so 37 apparent makes became the 29 real ones.

SQL to Python Analytics Pipeline

Python, SQL | github.com/KhaylubThompsonCalvin/sql-python-analytics-pipeline

- Built a reproducible analysis of 146 years of public Social Security name data (1880 to 2025), from download to charts, runnable without database access.
- Kept the original SQL Server connection as working evidence, with credentials held in environment variables.

Data Science Salary Story

Tableau | public.tableau.com/app/profile/khaylub.thompson

- Published a four-point Tableau story on 6,599 salary records comparing pay by location, role, experience, and year, with the data's limits stated.

EDUCATION

Associate of Applied Science, Computer Information Systems

Dec 2023 to present

Portland Community College, Portland, OR

- Completed Data Analytics (CIS 277A), Summer 2026, with full credit on all ten labs; in progress: Advanced SQL (CIS 276), Technical Writing (WR 227).
- PCC AI Hackathon (Mar 2026): trained a JetBot robot with a collision-detection model.

Law Studies (attended), University of Arizona

Tucson, AZ | 2016 to 2017

CERTIFICATIONS AND TRAINING

ESD and Calibration Certified, Planar Systems (2017 to 2025) | Hipot Testing Calibration Procedures | Final Quality Check and First Turn-On Processes | Lean Manufacturing and Continuous Improvement
